

SMART SHOPPING CART

“A smart shopping cart that helps the shopper know the places of orders and facilitates the shopping process”

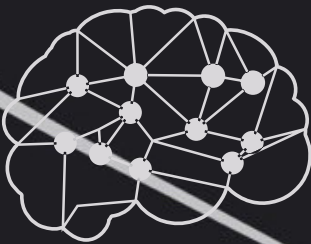

Recognizing sounds helps blind people find the place of requests

A payment device that allows the customer to pay

A screen equipped with a scanner that reads the barcode and informs the customer of the places of orders

Locally

We took 100 samples from the supermarket

50% of people are bored and stressed from wasting time

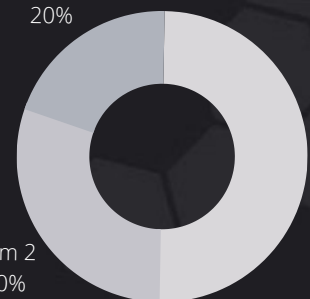

30% will leave the products and go out

20% would prefer to send a representative
